

What is frogfilter™?

frogfilter™ is a high quality, low cost and low maintenance system that removes 99% of food or organic debris particles from all sink fittings before they pass into the drainage system.

What are the benefits of using frogfilter™?

- Reduces Biological Oxygen Demand
- Reduces Total Suspended Solids
- Reduces Plumbing Blockages
- Reduces Odor Problems
- Reduces Corrosion and Acidity
- Reduces High Frequency Pump Outs
- Improves Performance
- Saves Money

How does frogfilter™ work?

Manufactured from high grade, recycled black plastic using a roto-mold process, the frogfilter™ is easily retro-fitted directly between the facility sink and floor drain. As the waste water is discharged from the sink and passes through the frogfilter™, all particles (which can be as fine as individual coffee grounds) are captured and held for easy, clean, manual disposal.

As waste flows through the frogfilter™ an expandable micro-porous filter catches virtually all the debris before the clarified water makes it's way into the drainage systems. The clear plastic cover to the frogfilter™ allows you to easily see when the filter needs to be changed. The micro-filter is easily changeable and disposed of into regular garbage collections bins.

Questions?

bluefrog Plumbing + Drain's considerate, professional service experts are highly trained and knowledgeable about plumbing systems. We'd love to answer any of your questions or evaluate your plumbing situation free of charge.
